

Complete each time the examination is performed and place in the patient's file

Dear Patient,

I continually look for technological advances to ensure that I am delivering the highest level in patient care to you. I am particularly concerned about oral cancer, which too often is only found in the later stages of development and, as a result, claims one life every hour in the United States. Oral cancer is a growing problem and is most common among people age 40 and older and tobacco users. Alarmingly, over 25% of oral cancer victims have no predisposing risk factors.

I have recently evaluated a new medical technology and found that using it, after my visual and manual exam of the oral cavity, improves my ability to identify, evaluate and monitor suspicious areas at their earliest stages. This simple, painless, and non-invasive technology, ViziLite®, gives me a better chance to find any oral abnormalities you may have at the earliest possible stage. Early detection of pre-cancerous tissue can minimize or eliminate the potentially disfiguring effects of oral cancer and possibly even save your life.

We have incorporated the ViziLite exam into the standard of care in our practice, to ensure that you receive the most comprehensive examination possible. The ViziLite exam will be offered to you annually.

This exam may not be covered by your insurance. ViziLite is recognized by the American Dental Association with procedure code D0431. My fee for this enhanced, separate exam is \$45.00

Yes, I authorize the clinician to use ViziLite along with the visual and manual oral examination. I accept financial responsibility for this enhanced examination.

Print name: _____

Signature: _____ Date: _____

No, I would prefer not to have the ViziLite exam at this time.

Print name: _____

Signature: _____ Date: _____

Vizilite®

Because better screening saves lives.
